

QGIS Application - Bug report #448

WinQGIS: GRASS vector does not see the table associated

2006-12-13 01:36 AM - Redmine Admin

Status: Closed	
Priority: Low	
Assignee: Redmine Admin	
Category: GRASS	
Affected QGIS version:	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed
Crashes QGIS or corrupts data:	Copied to github as #: 10507
Description	
If you click on a the "Open table" button or if use the pointer on a element of a GRASS vector you can not see any informations about the linked table, only the ids and categories. It works well with the OGR vectors.	

History

#1 - 2006-12-13 02:51 AM - Redmine Admin

Probably either GISBASE is not set correctly or database driver is missing.

Which driver is used? Can you use db.* modules from shell?

What errors are printed

#2 - 2006-12-13 02:53 AM - Redmine Admin

We mark critical only the bugs crashing QGIS.

#3 - 2006-12-13 03:10 AM - anonymous -

Hi Radim,

If I use db.* I have this outputs:

```
Linux@PORTATILE ~
```

```
$ db.tables.exe
```

```
grotte_dist
```

```
Linux@PORTATILE ~
```

```
$ db.connect -p
```

```
driver:dbf
```

```
database:$GISDBASE/$LOCATION_NAME/$MAPSET/dbf/
```

```
schema:(null)
```

```
group:(null)
```

The dbln file of a sample vector is:

```
1 gps_etrex cat $GISDBASE/$LOCATION_NAME/$MAPSET/dbf/ dbf
```

I don't see anything wrong but I'm not sure if I forgot something

#4 - 2006-12-13 04:18 AM - Redmine Admin

Yes, but db.select etc?

Radim

#5 - 2006-12-13 05:58 AM - Redmine Admin

If I make db.select table=grotte_dist

I can see all the data stored in the table

#6 - 2006-12-15 12:51 PM - Redmine Admin

I can confirm the problem with http://qgis.org/uploadfiles/testbuilds/qgis_setup.exe

(15.12.2006 9:45 CET) installed in directory without spaces.

It works however with my old cross compiled version so either the bug was introduced recently or it is a problem with [[MinGW]]/Windows.

This must be fixed for release IMO otherwise all GRASS is useless.

Radim

#7 - 2006-12-15 01:17 PM - Redmine Admin

It does work if qgis is started from MSYS shell (which was not started from QGIS GRASS Tools so GISBASE and GISRC are not set but it works also if MSYS was started from QGIS) and it does not work if qgis is started from command.com.

It means that it depends how QGIS was started. MSYS shell has maybe some variables set or it emulates(?) somehow something (?) which was compiled in with crosscompiler????

Radim

#8 - 2006-12-15 02:03 PM - Redmine Admin

According to Filemon QGIS does not even try to access dbf.exe. A GRASS database driver is started as separate process, on Windows it is started with _spawnl(_P_NOWAIT, startup, "", NULL).

Can it be possible that _spawnl is somehow restricted under certain circumstances for security reasons? QProcess is using [[CreateProcessA]]/CreateProcessW to start a process.

Radim

#9 - 2006-12-17 07:39 AM - Redmine Admin

The problem is that if QGIS is not run/compiled as command line application it does not have stdout/stdin open and db_start_driver function (grass/lib/db/dbmi_client/start.c)

fails here:

```
if ( (stdin_orig = _dup(_fileno(stdin))) == -1 ||
    (stdout_orig = _dup(_fileno(stdout))) == -1 )
{
    db_syserror ("can't duplicate stdin/stdout");
    return (dbDriver *) NULL;
}
```

#10 - 2006-12-17 08:48 AM - Redmine Admin

The patch for grass/lib/db/dbmi_client/start.c
start.c.patch1 which fixes this ticket is attached.

Unfortunately if QGIS is not compiled without stdin/stdout
and then run from batch, cmd.exe or MSYS shell
it will open command window for a while always when a new
GRASS database driver is started.

This ticket is fixed but I leave it open until developers who build
win binary patch their version of GRASS.

Replying to [comment:12 rblazek]:

| *Unfortunately if QGIS is not compiled without stdin/stdout*

Should be : if QGIS is compiled without stdin/stdout

#12 - 2006-12-17 09:18 AM - neteler-itc-it -

Patch applied.

#13 - 2006-12-17 06:29 PM - Tim Sutton

If the patch is applied in grass cvs head we can just update from cvs and rebuild grass. Or is there a particular feeling that we should use only grass stable

release along with qgis 0.8?

#14 - 2006-12-18 02:45 AM - neteler-itc-it -

The patch was applied to GRASS cvs head. All recent Windows fixes were only done there.

Markus

#15 - 2006-12-18 02:56 AM - neteler-itc-it -

Now also applied to 6.2-CVS release branch. However, this branch is lacking tons of Windows fixes which were done in CVS HEAD only.

#16 - 2006-12-31 06:42 PM - Tim Sutton

- *Resolution set to fixed*
- *Status changed from Open to Closed*

I have this resolved in the QGIS windows binary installer I am making. I built grass under msys with the above mentioned patch.

#17 - 2009-08-22 12:46 AM - Anonymous

Milestone Version 0.8 deleted
