QGIS Application - Bug report #4485

Item scale jumps randomly when panning around the map content on the composer.

2011-11-02 09:17 AM - Thaddeus -

Status: Closed Priority: Normal

Assignee:

Category: GUI

Affected QGIS version:master

Operating System:

Pull Request or Patch shapplied:

Crashes QGIS or corruphs data:

Regression?:

No

Resolution:

invalid

Copied to github as #: 14411

Description

I've come across this a few times and it disappears by itself after using the QGS file for a while: I think this time I captured this strange nuisance.

On the attached QGS file, I can consistently see this happening when opening on 1.7 and 1.7.1.

- 1) Composer window is visible.
- 2) Select Item tag.
- 3) Select "Move item content" tool.
- 4) pan around and watch Scale entry.

History

#1 - 2011-12-16 02:10 PM - Giovanni Manghi

- Target version set to Version 1.7.4

#2 - 2012-04-16 06:31 AM - Paolo Cavallini

- Crashes QGIS or corrupts data set to No
- Affected QGIS version set to master
- Target version changed from Version 1.7.4 to Version 1.8.0

#3 - 2012-09-04 11:56 AM - Paolo Cavallini

- Target version changed from Version 1.8.0 to Version 2.0.0

#4 - 2014-06-01 03:21 AM - Nyall Dawson

- Status changed from Open to Closed
- Resolution set to invalid

This is correct behaviour - the map is using the WGS84 coordinate system, so the scale depends on the latitude. Moving the map content will correctly result in the scale changing.
