Description

The current layout of SVG symbol list (preview of all symbols in a single box) is ok for up to 20-30 symbols. Now that we have more, and should add even more, a clickable tree is more appropriate.
Should be very easy to implement.

This has been implemented nicely in Styles. Please add the same solution to other places (namely, the Print composer). The composer should also load faster, and take less space, so it will be a significant improvement.
