

QGIS Application - Bug report #4639

Line spacing wrong when Export to PDF and data defined font properties

2011-12-13 04:37 AM - BoothelMaps .

Status: Closed	
Priority: Normal	
Assignee:	
Category: Labelling	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: end of life
Crashes QGIS or corrupts data:	Copied to github as #: 14540
Description	
<p>I am using the new labeling system and multi-line labels. I am also using data defined font properties such as Size and Font Family. Rendering to screen, this appears to work well. However, when exporting to PDF, the line spacing is wrong. The line spacing seems to be based on the Text Style (font and size) on the Label Settings tab of the Labeling Dialog, rather than using the data defined font properties.</p> <p>Changing the Text Style in the Labeling Dialog also results in minor changes in text positioning for single-line labels, but these changes are usually small, and thus they are not too troublesome. However, I mention it here as it may provide an additional clue to help debug the problem, as I believe that it is related to the line spacing problem.</p> <p>I am using QGIS 1.7.2 on Microsoft Windows 7.</p>
