Operating System: Linux	Easy fix?: No
Pull Request or Patch supplied:	Resolution: duplicate
Crashes QGIS or corrupts data:	Copied to github as #: 14568

Description

I loaded a few shape-Data into QGIS and saved them as a QGIS-Project (*.qgs). I closed QGIS and wanted to have all the shape-Data opened at once typing qgis *.qgs in the command line. The QGIS desktop opened but only had an extend of the upper third of the screen. It filled out the full width of the screen. The legend on the left was shown uncompletely and in the map window you could see only a very small representation of the shape-Data. I think this feature should be changed so that the Desktop extend fits to the data loaded into QGIS.
