Affected QGIS version:		**Regression?:**	No	
Operating System:	Windows	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	invalid	
Crashes QGIS or corrupts data:		**Copied to github as #:**	14569	

Description

Coordinate Capture plugin doesn't show its GUI.
I can activate it from the Plugins menu, and the rubber band Map Tool seems to work (the little red square is drawn at the click point), but I cannot see the coords output, nor set the plugin options that should appear in its own GUI (AFAICS from the source code).

I'm using qgis 1.7.3 from osgeo4w.

History

- Status changed from Open to Feedback

click the right button on a empty space in the toolbars and check "coordinate capture", this will show the GUI. Works here on both Linux and Windows.

- Resolution set to invalid

- Status changed from Feedback to Closed

Thanks Giuseppe, I missed that feature!
I didn't know that the plugin's gui panels could be managed with the right click ;)
