

QGIS Application - Bug report #469

WinQGIS: Cannot load gpx files

2006-12-18 07:29 AM - Redmine Admin

Status:	Closed	
Priority:	Low	
Assignee:	Tim Sutton	
Category:	C++ Plugins	
Affected QGIS version:		Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 10528
Description		
In Windows: If I use the plugin GPS->Create a new gpx file it say to choose a path and a name for the .gpx file but when I choose it it say: The layer is not a valid layer and can not be added to the map

Qgis is creating the gpx file, but not loading it. It works under linux. The code that is probably failing involves reading the .gpx file using an XML parser (expat?). Perhaps the windows version of that is causing the problem?

In fact, the windows version won't load any of my .gpx files, while the linux version does.

The problem seems to be that the gps provider dll is not present (but the gps plugin dll is).
