Description		
I think we could expand the current menu item, allowing an user to register as an "official user" in a single step: <ul style="list-style-type: none">- subscribing to the -users mailing list- adding an username to the new plugin app (so plugin reports can be identified)- collecting stats (numbers, age, type of use etc.; only if agreed, of course - can be skipped)- adding to the users map. It should be simple and will let us understand our user base much better.
