

QGIS Application - Bug report #477

Loading a PostGIS View is very slow

2006-12-22 04:07 AM - Redmine Admin

Status: Closed	
Priority: Low	
Assignee: Gavin Macaulay -	
Category: Vectors	
Affected QGIS version:	Regression?: No
Operating System: RedHat	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed
Crashes QGIS or corrupts data:	Copied to github as #: 10536

Description

The loading of a [[PostGIS]] view is much slower than the loading of a table with the same structure.

The simple view

```
CREATE OR REPLACE VIEW geo_gemeinden_v AS
```

```
SELECT oid, ogc_fid, wkb_geometry, name, gem_bfs, gmde_name, gmde_nr, bzrk_nr, eg_nr, plz, ktn_nr, new_date, archive_date, archive FROM geo_gemeinden;
```

needs 24secs to load. The table geo_gemeinden with the same structure less than 1sec.

For testing purposes I attach the dump of geo_gemeinden

History

#1 - 2006-12-22 04:11 AM - Redmine Admin

Please excuse but the mentioned file could not be attached due to size.

#2 - 2006-12-23 12:31 AM - Gavin Macaulay -

Qgis has to do a lot more work when loading views. It has to work out which table/column each column in the view comes from, and then choose a column to use as a unique key. This entails working out that information for all views in the database. If you have a lot of views in the database, this may take some time.

Notwithstanding all of that, 24 seconds is a lot longer than 1 second, and this area clearly needs some more work, but it's unlikely to happen before we release 0.8.

#3 - 2007-01-30 06:28 AM - Redmine Admin

Now release 0.8 is released and I want to ask for the state of solution. My DB has more than 300 Geo-Layers and much more Geo-Views. QGIS takes a very long time to load a view.

#4 - 2007-02-16 10:59 PM - Gavin Macaulay -

A potential speed-up has been committed to head (commit:2a35478a (SVN r6611)). Please test if you can. If it works, I'll port it to the 0.8.1 branch.

#5 - 2007-02-18 11:55 AM - Gavin Macaulay -

Hmm. It's actually slower :(

#6 - 2007-03-13 01:03 AM - Redmine Admin

I'll come back to my question about the state of solution. The slowness of views is a real and essential problem. I'm not able to use QGIS in our enterprise environment due to the view problem.

Nothing more has been done about this. I'd actually forgotten about it! I'll have another go this weekend.

Gavin

- *Status changed from Open to Closed*
- *Resolution set to fixed*

A fix for this is in commit:5324e893 (SVN r7072). It also addresses column renaming with 'AS' and views that refer to other views.
