it should be relatively easy to add to the processing toolbox (and that would be enough).

gdal2xyz already available in Processing toolbox. It was added about 5-6 month ago

oh, right, I had forgot about it :)

How about porting gdaltools to processing toolbox (those that do not have an equivalent) and removing gdaltool?

There are still reasons not to do so:

- Processing is not always 100% stable
- GDALTools shows the gdal command line, that can be reused from a shell

Eventually all the tools will be replaced by Processing, but we'll need some more work for this.
