Crashes QGIS or corrupts data:	No	**Copied to github as #:**	14745

Description

Hello, bonjour,

I don't manage to get the 1.7.3 version started. I have installed it, restarted the computer, re-installed QGIS...no way, t doesn't work. In the attachment is the full description (in French) of what happened. If you don't understand everything, don't hesitate to ask me for an english version.

THank you very much in advance !

Nicolas

History

#1 - 2012-02-05 09:51 AM - Jürgen Fischer

- OS version set to Vista Home

- Subject changed from Version 1.7.3. ne démarre pas to Version 1.7.3 does not start

- Operating System set to Windows

Try removing ArcGIS from PATH.

- Priority changed from High to Normal

#4 - 2012-02-06 02:00 AM - Nicolas Dolidon

I did not succeed in changing the path, but deleted ArcGIS from my computer, restarted it. It did not work either at the beginning. Then I tried to launch Python separately, type the command for traceback, help etc... Id didn't have the impression that it orked, but finally it did !
Sorry, i'm far not a specialist...
Many thanks anyways, now I can use the best GIS software ever (I've had the 1.5.0 version and it was great).

Regards,
Nicolas
