Description

Trying to change the grid annotation font size of a print composer's map item fails under QGIS' master branch. When clicking on the "Font..." button, the font selector appears and allows to change the font type but fails to apply the selected font size. The size is fixed to 11 pixels.

This bug appears to be very similar to #4981 but since there is no way to set the annotation font size other than the font selector, this bug leaves the user with no alternative way to set the size.
