QGIS Application - Bug report #5036
Qgis crashes when opening project properties

2012-02-16 06:28 AM - Eric Damtoft

Status:	Closed		
Priority:	High		
Assignee:			
Category:			
Affected QGIS version:	1.7.3	**Regression?:**	No
Operating System:	Ubuntu	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	worksforme
Crashes QGIS or corrupts data:		**Copied to github as #:**	14809

Description

When I open the program and click on project properties from the menu, qgis immediately closes. It closes some of the time when when opening layers or changing their properties, but the trying to open project properties does it 100% of the time, making qgis essentially unusable. I'm running version 1.7.3 on ubuntu 11.10. When run form the terminal (opening qgis, clicking on project properties), this is the result:

Warning: loading of qgis translation failed [/usr/share/qgis/i18n//qgis_en_US]

How can we reproduce this? Seems related to QtAccessibility and might be a more general ubuntu bug (see e.g.

https://bugs.launchpad.net/ubuntu/+source/at-spi2-core/+bug/877358)

- Status changed from Open to Feedback

#3 - 2012-02-16 08:24 AM - Eric Damtoft

I looked up the ubuntu bug with QtAccessible and tried running it in unity 2D as was suggested there, which resolved problem. It does look like it is a more general ubuntu bug. It's not Ideal, but this does let me use qgis. Thanks a lot for helping.
