

QGIS Application - Bug report #5057

Windows crash when inspecting project properties with WMS layer open

2012-02-20 07:38 AM - Jan Jensen

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	GUI	
Affected QGIS version:	1.7.3	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: invalid
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 14827
Description		
<p>Running v1.7.3 'Wroclaw' on 64 bits windows 7 machine.</p> <p>Qgis consistently crashes when I inspect project properties (settings->project properties) if I use WMS layers within that project.</p> <p>Specifically, I was fetching a background map over Europe from http://wms.geonorge.no/skwms1/wms.europa. My project has CRS WSG-84 utm zone 33. If I delete the WMS layer I can inspect project properties all I want.</p> <p>Additional information: code rev.00624b3, GDAL/OGR v 1.8.1, postgresSQL client v. 8.3.10, spatialite v 2.4.0, QWT v 5.2.1.</p>

- Resolution set to invalid
- Status changed from Open to Closed

This issue has already been fixed in qgis master and has been backported for the 1.7.4 release that is few days away. Meanwhile you can use qgis master using the osgeo4w installer.

#2 - 2012-02-20 07:43 AM - Giovanni Manghi

- Resolution deleted (invalid)
- Status changed from Closed to Feedback

sorry, it may not be the issue I was thinking. Please give qgis master a try and report back.

#3 - 2012-02-20 09:32 AM - Jan Jensen

My extensive testing (trying to replicate the error at least 3 times in a row) suggests that this does not happen with version 1.7.4. Horray :)

I suggest to CLOSE this issue.
