Category: Web Services clients/WFS	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: not reproducible
Crashes QGIS or corrupts data: No	Copied to github as #: 14845
Description	
<p>I am trying to add a layer from an Intergraph based WFS (serving xml based on GeoMedia WebMap software). I can connect OK to the WFS in QGIS but when I try and add a particular layer I get the following error (sorry this WFS I have setup inside my corporate domain so it is not available externally):</p> <p>"</p> <p>The Layer</p> <p>http://nzrdp-win64/USWFS1/request.aspx?SERVICE=WFS&#38;VERSION=1.0.0&#38;REQUEST=GetFeature&#38;TYPENAME=gmml:States&#38;SRSNAME=EPSG:4326 is not a valid layer and can not be added to the map</p> <p>"</p> <p>If I type the same URL into a browser I get (what I assume is) a valid response from this request as per attached xml.</p> <p>I may be able to arrange external access to a server running a GeoMedia WebMap WFS if that will help you. I can also send you the getcapabilities xml if that will help.</p>

- Status changed from Open to Feedback

Hello, bug triage...

as the WFS service is not public and it is not easy to set up a dedicated Intergraph server, would you like to make a test with a recent version of QGIS (2.12.1 or master) to confirm if this bug is still valid ?

Thanks !
