

QGIS Application - Bug report #5173

Shape file field precision includes the . when saving, but not when editing in the attribute table

2012-03-13 03:31 PM - Alister Hood

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	Data Provider		
Affected QGIS version:	master	Regression?:	No
Operating System:		Easy fix?:	No
Pull Request or Patch supplied:		Resolution:	fixed/implemented
Crashes QGIS or corrupts data:		Copied to github as #:	14920
Description			
<p>e.g. if an attribute field in a shapefile has precision = 2, when I edit it I can input values like 2.12, but when I save the layer this is rounded to 2.1</p> <p>Note: I am using GDAL 1.9.0 if that is relevant.</p>

- Target version changed from Version 2.0.0 to Future Release - Lower Priority

#4 - 2015-12-08 08:45 AM - Médéric RIBREUX

- Status changed from Open to Feedback

Hello, bug triage...

I can't reproduce it on QGIS 2.13 master (have set a decimal field of size 3 and precision 2).

Can you confirm this ?

#5 - 2015-12-13 11:08 PM - Alister Hood

Yes, it is pretty much fixed.

There is a problem with a corner case which would perhaps be best filed as a new issue:

- A) QGIS allows me to create a column with precision = length. I'm not sure if this itself is a bug, but it then behaves strangely with that column.
- B) If I create a field with precision = length = 2 I can save either three digits before the decimal point or two after it (is this a bug or a feature of the shapefile

format? Perhaps it is related to Christine's comment at #5546)

C) but the gui lets me put in a lot more digits both before and after the decimal point.

D) and even if I save the edit I can't see the "rounding" that occurs unless I reopen the attribute table.
