

QGIS Application - Bug report #5231

QGis crashes on Gradual styling

2012-03-26 12:17 AM - Victor Mensing

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Symbology	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution: worksforme
Crashes QGIS or corrupts data:		Copied to github as #: 14967
Description		
There are made significant improvements on saving styling on legends in QGis 1.7.4 vs 1.7.3, but if when chosen for saving a gradual legend on a large theme QGIS still crashes.

on what platform? can you please post a sample dataset that causes the issue? thanks.

#2 - 2012-03-26 12:42 AM - Victor Mensing

- File Clipboard01.jpg added

I use QGis 1.7.4 on Windows XP. The attached file is an export from the theme I used. I **can't** reproduce the crash with this file, so it seems it's more related to the case that the original data comes from an POSTGIS-theme. To reproduce my crash I think you better can export the shape again to postgis (using SRID 28992).

It seems my ZIPPED datafile is too large to attach. I will send it to you with a service.

- Category set to Symbology

Hi, thanks for the sample.

It works fine here as both shape and postgis layer, using qgis-development version.

Can you give it a go installing qgis-dev on Windows using osgeo4w? Thanks.

- Status changed from Open to Feedback

#6 - 2012-04-18 03:11 AM - Giovanni Manghi

- Status changed from Feedback to Closed
- Resolution set to worksforme

Closing for lack of feedback. Reopen if necessary.

I lost my password on this environmnet and was unable to ask for a new password. So i created a new account tot end this bug-report. I still had the crash. Also the first time running the newest (developers-version) of QGis.

Because of a computer crash I uses another laptop and since then I ws not able to reproduce the bug. So it stays uncleared why I had the crash.

the ID used here is an OSGeo id, there isn't a password recovery tool in the osgeo.org website?

So i created a new account tot end this bug-report. I still had the crash. Also the first time running the newest (developers-version) of QGis.

so we can assume it is/was a local issue? Did you a try to make a very clean install in your environment? I mean: remove .qgis, remove the program, remove the registry keys and then install again.

I'm not sure about that. And I'm still waiting to get back my old laptop to reproduce some things. So till then I can't figure it out clearly. Better is to close this issue for now and wait till I can get back with new information when possible.
