QGIS Application - Bug report #5285
NoData value should not be considered when classifying a raster

2012-04-02 11:24 PM - mattwigway .

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	Rasters			
Affected QGIS version:	master	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	duplicate	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	15005	

Description

When classifying a raster or when calculating min and max, the NoData value (on the transparency tab) should be ignored. For instance, I have a raster that has values between -30 and 130 as well as NoData values of -32768. Min, max and the classifier stretch the raster all the way to -32768.

You're right, sorry 'bout that. I evidently don't have permission to close it, can someone go ahead and do that?
