

QGIS Application - Bug report #53

Large markers are downscaled to the global iconSize in the legend

2006-04-04 07:30 AM - Marco Hugentobler

Status:	Closed	
Priority:	Low	
Assignee:	Marco Hugentobler	
Category:	Map Legend	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 10112
Description		
<p>Large point markers are not displayed in the correct size in the legend. This is because the qt4 QTreeWidget uses QIcon for the legend images. QTreeWidget has a member iconSize, which is valid for all items (in contrast to the qt3 ListView which allowed different icon sizes for different items). A solution could be to keep track of how large the images of all items are and change the global icon size when items are added / removed.</p>		

History

#1 - 2006-04-18 01:57 AM - Marco Hugentobler

- Resolution set to fixed
- Status changed from Open to Closed

The legend does now adapt the global icon size to the largest item pixmap.
