

QGIS Application - Bug report #530

Include Qt plugins for Wind and statical builds (Jpeg does not work)

2007-01-11 02:03 AM - guy-duplaa-onf-fr -

Status:	Closed	
Priority:	Low	
Assignee:	Tim Sutton	
Category:	Build/Install	
Affected QGIS version:		Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 10589
Description		
Opening the menu File/save as image, i can save fast and well in png, but choosing jpeg, the file is created but empty (0 ko)

I can't reproduce this. It works for me both in trunk (compiled on win2k) and 0.8 (windows binary download).

- Resolution deleted (workforme)

I installed it on others computers. Same stuff.  
I uninstall/download qgis-0.8.0\_setup.exe and install it, same stuff, jpeg is empty with rasters and or vectors

What version of windows do you have?  
Download <http://www.dependencywalker.com/> and run qgis from within that program, and save as jpeg. Attach all DLL:s loaded.

#4 - 2007-02-06 08:39 AM - guy-duplaa-onf-fr -

[[GuyDLL]].odt: The first 5 dll have an error but two exist:Grassplugin.dll and Grassprovider.dll and 3 doesn't exist :Grassplugin.dll.dll ; wintab32.dll ; Wintab32  
[[GuyDependencyWaLog]].odt at the end (page 50) is what appears the second time i run jpeg register, the first time it did it plus what you have in page 45 to 50.  
Hope it is what you needed.

There were missing libraries with the program dsitribution. In the mean time, try this:

- 1) In the directory where qgis.exe exist, make a sub-directory called 'imageformats'.
- 2) Copy the attached DLL to that directory.

Tim: We need to fix this with distribution. Every directory under \$QTDIR\plugins might be needed.

The attached file is a .exe and not a .dll (properties = C++ application development framework). May be i do something wrong ?

**#8 - 2007-02-07 12:04 PM - Magnus Homann**

I've added .zip file containing the DLL. Download, and unzip with [[WinZip]] as per instructions above. See if that helps?

**#9 - 2007-02-09 02:03 AM - guy-duplaa-onf-fr -**

Yessssss !!! it works perfectly well and fast.

Thank you very much.

So the process is:

- 1) In the directory where qgis.exe exist, make a sub-directory called 'imageformats'.
- 2) Unzip qjpeg1\_dll.zip. Copy the attached DLL to that directory.

That's all

**#10 - 2007-02-09 09:17 AM - Magnus Homann**

Excellent! Tim will include this in future win32 builds.

**#11 - 2007-02-23 11:34 AM - Tim Sutton**

- *Status changed from Open to Closed*

I have put all the qt plugins under a plugins/ folder in the install dir. I tested here on my machine and was able to write png an jpg images. Please test in the upcoming 0.8.1 preview release and reopen if the issue persists.

Many Thanks

Tim

Milestone Version 0.8.1 deleted
