QGIS Application - Bug report #538
delimited text plug-in lets QGIS crash on windows

2007-01-15 02:07 PM - timmichelsen-gmx-topmail-de -

Status:	Closed		
Priority:	Low		
Assignee:	nobody -		
Category:	C++ Plugins		
Affected QGIS version:		**Regression?:**	No
Operating System:	Windows	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	fixed
Crashes QGIS or corrupts data:		**Copied to github as #:**	10597

Description

When unsing the delimited text plug-in with a semicolon separated file QGIS show a error window with no text. There's a button to shut down QGIS.

In the last preview it worked well.

Is this in the pre-compiled version downloaded from qgis?

Do you have a sample file to attach?

Thanks.

> *Is this in the pre-compiled version downloaded from qgis?*

Yes, this one: http://download.qgis.org/qgis/win32/qgis-0.8.0_setup.exe

> *Do you have a sample file to attach?*

Sorry, I can't. The work is confidential. Please mail if you can't reproduce I will replace the information in the text file by dummy information.

The file has about 6000 datasets.

I can reproduce this with this input file:

X;Y

0;0

It works with 10.000 lines of similar data in trunk, however. I have no possiblity to debug 0.8 on win32, unfortunately.

#4 - 2007-02-03 02:59 PM - Magnus Homann

- Resolution set to fixed

- Status changed from Open to Closed

It was a problem with malformed lines, such as an extra line break at the end of dataset. If any line has less than 2 fields, it would crash. Fixed by .
