Description		
<p>The instructions for adding a new plugin (at http://plugins.qgis.org/) say to register a new plugin at https://issues.qgis.org/projects/qgis-user-plugins , however this page does not include a "New project" link.</p> <p>The work-around is to go to the root project page (https://issues.qgis.org/projects) and create a new top-level project, which someone will move under "User Plugins" project.</p> <p>This is confusing because</p> <ol style="list-style-type: none">1) No "New project" link on the page where it is expected2) Author can hesitate to create a new top-level project (as happened to me) <p>The solution is to allow all registered user to create subprojects of "User Plugins".</p> <p>For my own project (Loop Visible Layers), I can create a subproject (because I am manager) and I can also set it as a subproject of "User Plugins" (but I'm not sure this option was available when I created it initially or appeared after someone made my project a subproject or "User Plugins").</p> <p>This is a duplicate of bug #5408 in django tracker. In the meantime I have updated the documentation at http://plugins.qgis.org/ to create a new project and make it a subproject of "User Plugins".</p>		

History

#1 - 2012-08-03 06:30 AM - Giuseppe De Marco

I confirm that as of today the described issue still stands...

#2 - 2012-08-08 07:36 AM - James Stott

I can confirm this too. I can create a sub project under my project (Locked Layers Manager) but I cannot create one under the User Plugins project. My plugin has been created as a top level project and will need moving.

#3 - 2013-02-15 02:15 PM - Alexandre Neto

I confirm this situation, there is no way of making a project as subproject of "Users Plugins".
