Affected QGIS version:	master	**Regression?:**	No	
Operating System:	Windows 7	**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	invalid	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	15124	

Description

I have a shapefile with 124000 features and I tried to select a subset with a simple SQL statement FIELD = X with "Search Query Builder" (accessed from the attribute table) but QGIS crashed. Then I tried to use "Query" (accessed by right clicking on the shapefile") and it worked OK.

This happens both on Master and on 1.7.4.

- Status changed from Open to Feedback

Tested on a 200000+ records table, windows 7 and qgis master. No crash. Can you test another installation and/or dataset?

#2 - 2012-05-03 03:04 AM - Giovanni Manghi

just tested with your dataset and no crash.

#3 - 2012-05-03 03:10 AM - Filipe Dias

You may close this one. It no longer crashes after a clean installation. Thks
