

QGIS Application - Bug report #5556

Label field not saved

2012-05-08 11:38 AM - Pierre-Luc Auclair

Status:	Closed	
Priority:	High	
Assignee:		
Category:	Labelling	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution: wontfix
Crashes QGIS or corrupts data:		Copied to github as #: 15142
Description		
<p>The "Field containing label" property is not saved, using the normal labeling symbology.</p> <p>If this is relevant in any way : the layer is a polygon layer, and the label is displaying joined data (the source is an excel file).</p> <p>Using version 1.8.0.6 on Windows.</p>		

History

what do you mean with "normal" labelling symbology? the one available in the vector properties or the one available trough the "abc" button in the labelling toolbar? thanks.

#2 - 2012-05-08 11:47 AM - Pierre-Luc Auclair

The one in vector properties.

#3 - 2012-05-08 11:50 AM - Giovanni Manghi

- Resolution set to wontfix
- Status changed from Open to Closed

| The one in vector properties.

that is the old engine, no more maintained and kept until 2.0 just for compatibility with old projects. Please use the new tool. Cheers!

Thanks ! Did now know that ! Will the new engine eventually replace this screen ? Should I use the new engine exclusively or will the old symbology be automagically converted to the new format ?

not sure if new labelling will go in vector properties

| *Should I use the new engine exclusively*

I would say yes

| *or will the old symbology be automagically converted to the new format ?*

pretty sure this will not happen
