

QGIS Application - Bug report #56

Map composer: width&height swapped

2006-04-04 02:13 PM - werchowyna-epf-pl -

Status:	Closed	
Priority:	Low	
Assignee:	Gary Sherman	
Category:	Map Canvas	
Affected QGIS version:		Regression?: No
Operating System:	Debian	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 10115
Description		
<p>In the map composer the width&height in General and Item tabs have different meaning - but it's hard to tell which one is right. Anyway, width field in General tab is the same what height is in Item tab.</p> <p>Maciek</p>		

History

#1 - 2006-05-09 06:20 PM - Gary Sherman

- Resolution set to fixed
- Status changed from Open to Closed

The General Tab refers to the paper size in portrait mode and is therefore correct even though it looks wrong in landscape mode. We may need an explanation added to the dialog.
