

QGIS Application - Feature request #5606

Defining column types for CSV imports

2012-05-16 07:23 AM - Kenton Ngo

Status:	Open	Resolution: Copied to github as #: 15179
Priority:	Normal	
Assignee:		
Category:	Data Provider/Delimited Text	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>At work we use Mac OS X. Microsoft Office for Mac no longer supports DBF exports, and much of our data that we'd like mapped lives in Excel-compatible files.</p> <p>I'm currently exporting as CSV using this workaround, but it requires me to create a CSVT file, an annoying extra step. http://underdark.wordpress.com/2011/03/07/how-to-specify-data-types-of-csv-columns-for-use-in-qgis/</p> <p>Is there any way to eliminate this extra step by allowing a user to define the column types at import?</p>

I will work on this. Longs getting casted to floats from csvs has been an inconvenience for a while. Plz somebody with permissions assign this to me, thanks.

Can you add a short description about your plans. Which datatypes exactly do you want to support (Int/Long/Float/Double) and will there be auto-detection of some kind of these types or what is the workflow?

#5 - 2015-03-09 04:41 AM - Karolina Alexiou

The workflow would be to allow the user to force a data type for 1 or more columns. Basically I am thinking of adding another row to the UI when importing delimited text layer where the user would be able to select Int/Long/Float/Double/String or Autodetect(default). Right now there is autodetection, but it doesn't always work right. I could also see if there is some obvious improvement to be done in that.

- OS version deleted (1.9)

- Operating System deleted (Mac OS X)

#7 - 2015-03-09 06:31 AM - Jukka Rahkonen

Perhaps you could use ODS format instead? GDAL and Excel both can read and write the format http://www.gdal.org/drv_ods.html.

#8 - 2015-03-09 06:40 AM - Karolina Alexiou

Not really applicable to us, we just want more control over importing raw text files (unlike the original poster).

#9 - 2015-03-18 11:06 PM - Karolina Alexiou

<https://github.com/qgis/QGIS/pull/1957>

I made a pull request to QGIS upstream which improves the autodetection by also adding long types.

No work yet on forcing the type from the import menu.

- *Category set to Data Provider/Delimited Text*

Hello, bug triage...

the PR has been merged.

One good idea (on the GUI part) would be to try to make the delimited text provider act like LibreOffice Calc csv importer:

- there is a QComboBox with the list of each type.
- When you select a column, you can use the QComboBox to define the type of the selected column.

We just need a way to display the manually defined type of columns (upper or above the column name), but I am sure it's feasible.
