Are you sure you're using the master version and not the db\_manager in ~/.qgis/python/plugins/?

I'm increasing the version number in master so users will see the popup message that warning them about it.

As well I'm fixing it out of master (in the original db\_manager repo), but the master version was never affected by that problem.

Hi

Thanks - indeed I did have a copy of the plugins in my user plugins folder (and it works fine using the builtin version thanks).

Regards
