QGIS Application - Bug report #5633
Memory Layers Attribute Table do not display the data

2012-05-24 02:18 AM - Roberto BobMaX

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	Data Provider		
Affected QGIS version:	master	**Regression?:**	No
Operating System:	all	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	fixed/implemented
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	15200

Description

On Windows and Linux, QGis Attribute data panel do not display the fields and records of Memory Layers.

To debug it, you can use QGisSRTM plugin and TableManager plugin (that instead displays data correctly).

On MacOSX, it works.

Hello,

I can report that showing attributes of an in-memory layer works well under QGis 2.4 (at least on MS-Windows).

I can see every attribute with no errors even those that has been freshly edited.

If nobody can confirm the bug, I think that we should close it...

#6 - 2015-12-07 07:17 AM - Médéric RIBREUX

- Resolution set to fixed/implemented

- Status changed from Open to Closed

- % Done changed from 0 to 100

Ok, bug triage...

I am closing this one ! The new scratch memory layer type doesn't have this problem anymore...
