Crashes QGIS or corrupts data:			**Copied to github as #:**	15214

Description

Hi,

I've installed QGIS 1.7.4 via Ubuntugis-unstable, on a fresh Ubuntu 12.04 and I've noticed the following:

http://ubuntuone.com/3PXriik6g4Fn3r8ix58dMn

Initially I've thought it could be a graphic card driver issue, so I've teste both on ATI and Nvidia graphics in Ubuntu 12.04 machines and the result was the same. I've tested with QGIS 1.8 and again the same.

So I wonder if this is a QGIS issue or a Ubuntu/graphics driver issue...

Does anyone report the same?

Cheers,

Pedro
