Layersets

Hi!

When you work with a lot of layers, you spend a lot of time making your layers visible/invisible to get the desired view at your data. There is a risk of error when doing so (you can easily forget a layer).

What would be great is to have a Layerset manager, where you could store all the layers visibility. So you could switch all the layers visibility by just changing one drop down menu.

In the Composer Manager, you could also assign a Layerset to a map (instead of the "freeze map content" option, which is not very practical when you want to modify the contents).

Thanks!!

In the Composer Manager, you could also assign a Layerset to a map (instead of the "freeze map content" option, which is not very practical when you want to modify the contents).

Thanks!!
In the meantime, I made to implement this function:
http://plugins.qgis.org/plugins/layerCombinations/

Very nice Olivier. I will for sure have lots of use for it when dealing with multimap composers. I was using layer groups until now. Your tool avoids duplicating layers in project. I have a request in the dedicated hub https://github.com/redlegoreng/layerCombinations/issues/10

Do you think the feature request can be closed?

- Status changed from Open to Feedback

Hello, bug triage...

I think we can close it because in QGIS 2.12 (and probably in earlier versions), there is the "Manage layer visibility" option and it also can be used in the composer...

Can you confirm this?

- Resolution set to fixed/implemented
- Status changed from Feedback to Closed
- % Done changed from 0 to 100

Hello, bug triage...

closing this bug for lack of feedback and because everything seems to be implemented in QGIS master...

Feel free to reopen it if I have missed something!
