Description

Hello all.

I was using Print composer in Qgis 1.8 and I was able to add some labels, scale bar, map, etc. Then in the process, I closed one of the item windows, and the right panel never shows again.

I have tried uninstalling Qgis, deleting the remaining files, and reinstall again, but whenever I opened the Print composer, the right panel is missing.

What do you suggest to overcome this problem?

History

#1 - 2012-07-14 06:16 AM - Nathan Woodrow

- Resolution set to invalid

- Status changed from Open to Closed

Right click on the toolbar in the composer and enable the panel again.

#2 - 2012-07-30 10:00 PM - Damien O'Grady

This bug should not be closed - the solution is not possible for the mac version. The panels don't seem recoverable.
