Crashes QGIS or corrupts data:	No	**Copied to github as #:**	15422

Description

Hi,

I have a postgres table of lines (see attachment).

In QGIS 1.7 I can split them perfectly.

In QGIS 1.8 I can do it too, but when I save changes I noticed that QGIS 1.8 uses the same primary keys in all splitted features (so Postgres complains that it violates Primary Key rule).

I noticed that my table has primary key as last column, while other tables with it at first position do the work.
