

QGIS Application - Feature request #6080

The Feature_Count param should be greater than zero

Easy fix?:	No	Copied to github as #: 15434
Description On qgis-dev, the WMS provider allow to define the feature_count as the max number of information retrieval with a GetFeatureInfo request. Actually the values is zero that for the WMS server mean "give me one only feature response). So the wms server will return zero or one feature founded. But the user cannot know prevoisly if the dataset will have some feature overlappes. So the value 0 as default is a bite mis-understanding for the user. I guess a better value could be 10 or 20 (20 overlapping feature if a rare situation). Infact if the wms server found one only feature will return one only. If it found more than one feature will return all. So the user can understand that effectively the dataset as some feature overlapped.
