QGIS Application - Bug report #6084
Raster Min Max Value Error

2012-07-23 06:43 AM - Enrico Fiore

Status:	Closed			
Priority:	High			
Assignee:				
Category:	Rasters			
Affected QGIS version:	1.8.0		**Regression?:**	No
Operating System:	Windows		**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	duplicate
Crashes QGIS or corrupts data:			**Copied to github as #:**	15438

Description

I start my analysis with a raster (GeoTIFF) that derives from SAGA Kernel Density tools (min:5.37148e-11 max: 0.0782997).

Then I multiply it per 10000 with QGIS raster calculator.

When I control min and max values, in the layer style schedule, they are wrong: min: 2.15456e-05 and valore max: 629.118.

But if I interrogate my raster with the identify tool the values there are and they are correct.

I made the same procedures with the grass plugin, in this case the min e max values show in the QGIS layer style schedule they are correct: min 5.37148e-07 and max: 782.997.

Although I can't manage the Null value that are colored.

I attach the original file.
