

QGIS Application - Bug report #6190

Displaying multipoint objects from MSSQL in QGIS

2012-08-13 05:53 AM - James Perrins

Status:	Closed	
Priority:	Normal	
Assignee:	Tamas Szekeres	
Category:	Data Provider/MSSQL	
Affected QGIS version:	master	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 15504
Description		
<p>I'm not sure if this is a configuration issue - but when I have a multipoint object in the SQL database (displays as such in SQL and mapserver etc) - I only see one point in QGIS.</p> <p>I can edit the record in QGIS adding additional parts to the object (more points) and these seem to be saved correctly in the SQL database - but whatever I do I am only seeing a single point on the map in QGIS.</p> <p>Multipart lines seem to work as expected (i.e. all line segments are displayed)</p> <p>Thanks</p>
