Category:	Data Provider/MSSQL		
Affected QGIS version:	master	**Regression?:**	No
Operating System:	Windows	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	15504

Description

I'm not sure if this is a configuration issue - but when I have a multipoint object in the SQL database (displays as such in SQL and mapserver etc) - I only see one point in QGIS.

I can edit the record in QGIS adding additional parts to the object (more points) and these seem to be saved correctly in the SQL database - but whatever I do I am only seeing a single point on the map in QGIS.

Multipart lines seem to work as expected (i.e. all line segments are displayed)

Thanks
