

QGIS Application - Feature request #6201

Option to disable automatic reclassification

2012-08-16 01:36 AM - Tammo Jan Dijkema

Status:	Closed	
Priority:	Normal	
Assignee:	Nathan Woodrow	
Category:	Symbology	
Pull Request or Patch supplied:		Resolution: fixed/implemented
Easy fix?:	No	Copied to github as #: 15515
Description In qgis 1.8, when changing the column which is used for the classification, the classification is recomputed automatically. This can be inconvenient when making the same map for multiple data columns. In earlier versions, the classification was recomputed when the button 'Classify' was pressed, which is now superfluous. Perhaps we could replace the button 'Classify' with a "Freeze Classification" button, or something like that.

- Status changed from Open to In Progress

Hello, bug triage...

I think this is fixed in QGIS 2.13 (and probably in earlier versions): when you change the column in the graduated renderer, you need to click on the "Classify" button to reclassify.

Can you confirm this ?

#5 - 2015-12-13 03:41 AM - Tammo Jan Dijkema

I can confirm that indeed in 2.12 you need to click 'classify' to reclassify when changing the column. So for me, this is fixed.
