<b>Pull Request or Patch supplied:</b>	<b>Resolution:</b> fixed
<b>Crashes QGIS or corrupts data:</b>	<b>Copied to github as #:</b> 10680
<b>Description</b>	
When I want to use georeferencer on windows qgis-0.8.1-preview1.exe it's replied "error(14): unable to open database SRS.db" after that the good window is opened the map draws but zoom and others "buttons" don't appear

Probably an issue with PKGDATAPATH. I will investigate.

##### #2 - 2007-02-28 12:27 PM - Magnus Homann

- Resolution set to fixed

- Status changed from In Progress to Closed

No, clash with old/new plugins. The plugins have been renamed, and the old files were still around and got picked up by Qgis. That's why there are two of each plugin when you view the plugin manager.

A workaround is to go to C:\Program Files\Quantum GIS\lib\qgis and remove all files older than 23rd of February. We will update the package.
