QGIS Application - Bug report #6253
Multi attribute editing - Only one value checked results in error

2012-08-27 04:49 AM - Matthias Kuhn

Status:	Closed		
Priority:	Normal		
Assignee:	Jürgen Fischer

Affected QGIS version:	master	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	15559

Description

When editing the attribute table of a vector layer with the multi attribute editing tool an array should be generated to be inserted into postgresql. This array is formatted as {1,2,3}.
If only one value is inserted, the array should be {1}. But if only one value is checked (which is not the first one in the list) the resulting array looks like this: {,3}. This is not accepted by postgresql.

The attached patch solves this problem. Please review and apply.
