<b>Description</b>		
<p>Our student had the following problem, after migrating to OSX 10.8.1, who is missing their raster menu items:</p> <p>??After updating from OSX Lion to OSX Mountain lion (OSX Version 10.8.1), upon opening QGIS I get this message</p> <p>"Unable to load GdalTools plugin. The required "osgeo [python-gdal]" module is missing. Install it and try again".</p> <p>When I check the plugins, it looks installed and the box is checked. How do I resolve this issue? I have no menu options for the Raster dropdown menu, making this practical undoable on this machine.??</p> <p>We'd be grateful for any help.</p> <p>Regards</p> <p>Damien</p>
