Crashes QGIS or corrupts data:	No	**Copied to github as #:**	15616

Description

Seems autocompletion don't work for some "complex" cases. For example, when I try to enter next code

    l = qgis.utils.iface.mapCanvas().currentLayer()

autocompletion works only for mapCanvas() and after this stops working (e.g. I can't get hint for currentLayer())

- Status changed from Open to Closed

I don't think this is possible with the current console implementation.
