QGIS Application - Bug report #6353
Field calculator displays real values in the attribute table instead of rounding them to the field precision

2012-09-16 10:38 PM - Alister Hood

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	Vectors			
Affected QGIS version:	master	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	fixed/implemented	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	15625	

Description

(Perhaps I should have reopened #3606 - what is the protocol around here?)

- Use the Field calculator to write e.g. 9/17.0 to an INTEGER field

- In the attribute table you see the real value: 0.529411764705882

- Press the Save button

- Close and reopen the attribute table.

- The value is updated with the proper one from layer: 1

- Status changed from Open to Closed

Hello, bug triage...

it seems that the results are now directly displayed by following the attribute type (at least on master 2.13).

When I try to reproduce the bug steps on a Shapefile, every value is directly set at 1 just right after pressing Ok button of Field calculator. No need to save/close/reopen attribute table anymore.
