Pull Request or Patch supplied:	No	**Resolution:**	fixed/implemented	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	15656	

Description

Hi,
I notice when ask to the composer to set the extent to the map-extent it
draw starting from top.
This is more complex to use because almost always the map go out of the composer space and need to use the move command to
relocate the map inside the composer space.
I guess should be better that the position was calculated related to the center of map (left-right and top-down).

I test better.
I see the availability of the options position and dimension.
But almost on windows it seem don't work or work wrong.
Infact I try to check the center position, but it still maintain the top-left.
It seem put the image center in the top-left .
Doing this it the real image visible in the layout is only a quarter of all.

IMHO the behaviour is almost correct: the correct state is saved. The only minor issue is that it is saved as top left corner (with recalculated coords), even
if the user selected the center.

If I understand this bug correctly, it's been fixed in master. Are you able to test with a current development version and let me know if you still experience
this?
