

QGIS Application - Bug report #6428

Gui: horizontal spacer for "marker line" symbols seems out of place

2012-09-28 03:48 AM - Alister Hood

Status: Closed	
Priority: Low	
Assignee:	
Category: GUI	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	Copied to github as #: 15672
Description	
<p>In the redesigned symbology gui when a "marker line" symbol layer is selected (for a polyline layer), or an "outline: marker line" symbol layer is selected (for a polygon layer), then there is a horizontal separator above the options for marker rotation.</p> <p>This separator seems completely out of place.</p> <p>There are no separators for any of the other types of symbol layer. Note that the "simple line" symbol layer instead has a gap (depending on the height of the dialogue) above the less significant "join style" and "cap style" options.</p> <p>There are no other separators in the entire layer properties dialogue. Logically there are other places where a separator would make a lot more sense. e.g. underneath the "symbol layer type" selector.</p>	

History

#1 - 2012-09-28 03:50 AM - Alister Hood

- Subject changed from *Gui: horizontal spacer seems out of place* to *Gui: horizontal spacer for "marker line" symbols seems out of place*

#2 - 2014-05-04 05:01 AM - Nyal Dawson

Can this be closed? I can't see this horizontal spacer in current master...

#3 - 2014-05-04 11:50 PM - Alister Hood

Yeah, maybe it is fixed. Are you on Windows? I don't have a Windows machine to check there anymore. There is no visible separator on Linux. There is a gap beneath "symbol layer type" which isn't there when "simple line" is selected, but maybe that is because of the widget that is used to group the marker placement options...

#4 - 2015-07-12 07:11 PM - Nyal Dawson

- Resolution set to *fixed/implemented*

- Status changed from *Open* to *Closed*

As reported, no longer an issue
