#### Description

In QGIS master (and 1.8.0), if I delete some features on a layer which supports WFS-T, QGIS fails to populate the request properly. The feature ids of the features to delete are left out. EG, i deleted two features and QGIS sent:

```
...  
<Delete xmlns="http://www.opengis.net/wfs" typeName="sps:Boundary"><Filter xmlns="http://www.opengis.net/ogc"/></Delete>  
...
```

#### History

#1 - 2012-10-07 10:49 PM - Chris Smith

- Status changed from Open to Closed

This turned out to be the server not sending the feature ids of the original features (so QGIS doesn't know what to send back).
