QGIS Application - Bug report #6557
QGIS crashes when going into properties of ASC Raster

2012-10-22 07:06 AM - Jonathan Moules

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:				
Affected QGIS version:	1.8.0		**Regression?:**	No
Operating System:			**Easy fix?:**	No
Pull Request or Patch supplied:	No		**Resolution:**	worksforme
Crashes QGIS or corrupts data:	Yes		**Copied to github as #:**	15757

Description

I have an extremely simple ASCII raster, created using the rules here:

http://resources.esri.com/help/9.3/ArcGISengine/java/Gp_ToolRef/Spatial_Analyst_Tools/esri_ascii_raster_format.htm

The content of it is here: (also attached)

```
    ncols 4
    nrows 4
    xllcorner 20
    yllcorner 8.5
    cellsize 0.5
    nodata_value -32768
    0.1 0.2 0.3 0.4
    0.2 0.3 0.4 0.5
    0.3 0.4 0.5 0.6
    0.4 0.5 0.6 0.7
```

While QGIS will let me add it, if I double click it, or Right Click->Properties, QGIS locks up entirely.

ArcGIS works fine with it, so I believe the raster is acceptable.

History

#1 - 2012-12-25 06:39 AM - Giovanni Manghi

- Resolution set to worksforme

- Status changed from Open to Closed

works fine in qgis master, but also on 1.8 here so it must be a local issue. Please reopen if you have further evidence of bug.

#2 - 2012-12-27 09:02 AM - Jonathan Moules

Odd. Yep, works fine in my new 1.8.0 install but definitely didn't previously.
