| **Crashes QGIS or corrupts data:** | No | **Copied to github as #:** | 15783 |

**Description**

The "SQL where clause" text widget in the search query builder (advanced search in the attribute table) accepts something other than plain text as pasted data.  This is weird.

To demonstrate, copy a cell from Excel and paste it in.  The text will wrap at the same width as the cell width.

**History**

**#1 - 2015-11-11 03:11 AM - Médéric RIBREUX**

*- Resolution set to fixed/implemented*

*- Status changed from Open to Closed*

Hello, bug triage...

I can't reproduce it on QGIS 2.13 master on any expression dialog.

I am closing this bug.
