Description		
<p>Is it possible to add this possibilitie : for Qgis it could be interesting to have mail merged word documents with QGIS maps and data</p> <p>I will try to explain better the demand with an exemple : mail merged word documents with QGIS maps and data</p> <p>i have one parcel, the parcel is refer"enced like that AB0123, the owner is Mr Jhons, adress is 124 love street.</p> <p>in QGIS Web Client administration, i put the fallowing parameters :</p> <p>for my feature PARCEL, field REFERENCE i put a name for "merge field" : par_ref</p> <p>for PARCEL again but field OWNER, i put the "merge field" : par_own</p> <p>etc.</p> <p>in parrallel, i have a word document wich is a "model". I put a presentation like that :</p> <p>PARCEL INFORMATION</p> <p>Reference of the parcel : "par_ref"</p> <p>Adress of the parcel : "par_adr"</p> <p>Owner of the parcel : "par_own"</p> <p>...</p> <p>After that, the fonctionnalty permits to click on one parcel, print the document wich using the model and the information will be completed with the information of this parcel.</p> <p>the result in word must be :</p> <p>PARCEL INFORMATION</p> <p>Reference of the parcel : AB0123</p> <p>Adress of the parcel : 123 love street</p> <p>Owner of the parcel : Mr Johns</p>

not clear at all if this request is against qgis desktop or web client. In any case seems something more fitted for a plugin or a for a tailor made envelopment.
Please leave feedback.
