

QGIS Application - Bug report #6709

Creating a shapefile fails silently when you don't have permissions (should have an error message, consistent with other actions)

2012-11-15 08:31 PM - Alister Hood

Status: Closed	
Priority: Low	
Assignee:	
Category: GUI	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 15874
Description	
<p>- Right click on a vector layer and choose "save as". Try to save it somewhere you don't have permissions (often C:/ on Windows). You will get an error message saying to contact the administrator to get permissions.</p> <p>- Click "Layer>New>New Shapefile layer" and try to save it to the same place. The file will not be saved, but there will be no error message. (and anyway, is there a reason why the QT save dialog is used in this case instead of the native Windows dialog? I think it might be needed to provide that encoding option, but I can't remember for sure).</p> <p>Only tested on Windows.</p>
