

QGIS Application - Bug report #6718

Edit button toggle not processed if qgis is busy

2012-11-16 02:29 AM - Sandro Santilli

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	GUI	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 15883
Description		
<p>Steps to reproduce:</p> <ol style="list-style-type: none">1. Have an <i>expensive</i> layer loaded (a postgis view using a chain of st_buffer with positive and negative values, maybe)2. Load another layer (linear, I was using)3. Enable snapping option, requiring snapping on both the above layers4. Enter editing mode in the linear layer5. Request moving a vertex6. Verify that the move takes a <i>LOT</i> of time. CPU should be spinning, you shouldn't see the move on the canvas (yet). The cursor spins and changes shape when you move from canvas to menu bar. If this is not happening try better the steps before.7. While the CPU is spinning, click on the Edit button again. You should NOT see the button immediately rendered as depressed because qgis is still busy.8. Wait for the hard qgis task to complete. At this point you should see the vertex moved. BUT: <p>Expected behavior:</p> <ul style="list-style-type: none">- QGIS asks you to Save changes <p>Obtained behavior:</p> <ul style="list-style-type: none">- QGIS doesn't ask you anything.- The Edit button is depressed- The layer being edited has the "edit" icon in the layer manager.		

History

#1 - 2012-12-12 11:19 PM - ramon .

I think this is more general than just the edit button. For example, I routinely encounter something very like this if I'm zooming around an image and selecting the pan tool while QGIS is thinking, results in the pan tool not being selected once QGIS stops thinking.

A related, but maybe not quite the same one (which is rarer) is if I have a vector layer I'm editing over a raster. Zoom in on the raster, select Add Feature while QGIS is thinking, and usually the Add Feature bit is ignored, and I still have a zoom tool. Occassionally, the Add Feature is depressed, but I have a mouse cursor that looks and works like a zoom tool.

#2 - 2017-05-01 01:09 AM - Giovanni Manghi

- Easy fix? set to No
- Regression? set to No

#3 - 2019-03-09 04:04 PM - Giovanni Manghi

- Resolution set to end of life
- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR
